

Task 29: WEB: Styling HTML pages and Navigation

Objective: Apply styles using CSS and the Flexbox model to enhance the visual appeal and layout of the existing HTML pages and navigation.

Task Description:

Global Styles:

- Create a new CSS file **“*styles.css*”** to store global styles.
- Link the CSS file to all HTML pages.

Common Header:

- Apply styles to the common header in the index.html file.
- Center project name using flexbox model.
- Add padding and styling for better visual appeal.

Navigation:

- Style the navigation links on the index.html page using Flexbox.
- Arrange the links horizontally with equal spacing between them.
- Apply hover effects to highlight links.

Pages:

- Style the existing pages to enhance the UI/UX experience.
- Use flexbox for centering the lists.
- Apply background colors or borders for better separation.
- Ensure that the navigation links across all pages have consistent styling.
- Apply similar hover effects for a unified user experience.
- Use position sticky for table head
- Hint: Set the table max-height to 450px

Form Styling:

- Style the input elements and buttons within the forms on each page.
- Apply consistent styling for a cohesive look.

Bonus Responsive Design:

- Implement responsive design using Flexbox to adapt the layout for different screen sizes.
- Apply consistent styling for a cohesive look.
- Add media queries for responsive design

Deliverables:

Updated HTML pages with linked CSS files, showcasing the Airlines Project Web Interface with styled elements using Flexbox model.
